DETAILED ACTION

Information Disclosure Statement

The information disclosure statement filed 04/05/06 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

Election/Restrictions

Claim 15, 19-27, 30-31 and 33 withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected embodiment, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 3/13/09.

Applicant has not provided grounds for traversal. The requirement is still deemed proper and is therefore made FINAL.

Drawings

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "61" has been used to designate both inner surface and conducting zone. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any

amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

Claim 28 recites the limitation "the last turn" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 14 and 16-18 are rejected under 35 U.S.C. 102(e) as being anticipated by Moree [US 6,921,988].

In regard to claim 14, Moree teaches in [Fig. 6a] an anti-intrusion device for detecting possible attempts to open a housing, comprising at least one spring [51-53], the spring being arranged in such a way as to be under pressure and act electrically on an electronic circuit [60] when the housing is closed, and to no longer act on the electronic circuit when the housing is open.

In regard to claim 16, Moree teaches in [Fig. 6a] that the spring is placed in a guidance device [notches in 22] arranged so as to guide the spring along the longitudinal axis of said spring.

In regard to claim 17, Moree teaches in [Fig. 6a] that the guidance device exhibits a substantially cylindrical recess, in which recess the spring is intended to be placed.

In regard to claim 18, Moree teaches in [Fig. 6a and col. 4, lines 42+] that the action of the spring on the electronic circuit is effected through an electrical contact between a conducting part of the spring and conducting tracks of the circuit.

Allowable Subject Matter

Claims 28 and 32 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2832

In regard to claim 28, the references do not teach that the spring is in contact with the electronic circuit, the last turn of said spring is electrically linked to the various conducting tracks or at least two of them. Claim 32 is dependent on claim 28.
